THIS IS UNEVALUATED INFORMATION

- Two new wings were added recently to the Chemical Factory of Albertfalva (H 51), Albertfalvai Vegyimdvek, N.V.
- 2. An oleaginous explosive is being manufactured in these new additions to the factory. At the conclusion of the manufacturing process the explosive is placed in aluminum tottles, weighing $\frac{1}{2}$ and 1 kg. each. There are 12 half-kilogram bottles to a case. The cases have Russian inscriptions on them and they are hauled away in Russian trucks from the factory. The final destination of these explosives is unknown.
- 3. The explosive in question, believed to be a filler for grenades, is of yellowish-green color and is moderately thick. It is manufactured at a temperature of 4-60 Centigrade at which temperature it begins to evaporate. The vapor is believed to cause skin injuries. Pending the arrival of the often promised protective clothing the workers are rotated at monthly intervals.
- 4. There are 338 persons working in this part of the factory.
